

2<sup>nd</sup> August 2016

Dear All,

We at South City International School are committed towards good health, sanitation and clean environment. The recent reports of the dreaded viral disease “dengue” striking Kolkata, some of which have even claimed lives is alarming. To instil the values of personal commitment towards a healthier society, it is important for parents and guardians to take measures in order to protect themselves and their loved ones against this fatal disease.

To prevent the breeding of mosquitoes in and around our homes, the following measures are effective:

- All possible mosquito breeding sources and sites should be detected & eliminated.
- Remove water from coolers and other small containers at least once in a week.
- Use aerosol during day time to prevent the bites of mosquitoes.
- Do not wear clothes that expose arms and legs.
- Children should not be allowed to play in shorts and half sleeved clothes.
- Use mosquito nets or mosquito repellents while sleeping during day time.
- Do not self-medicate if you have symptoms of dengue like fever and body ache.
- See a doctor immediately if any symptoms of dengue is visible.
