

## Year-Long Creative Computing and Robotics program

Dear Parents,

As all of you know, computers are part of our everyday life. We need computer software to do all kinds of tasks – from using daily use software like word processors, email software to specialized software that may be needed in our profession- be it in mathematics, medical sciences, astronomy or music production. It has become imperative for today’s kids not only to become computer savvy, but also proficient on how to make it work for them at an early stage of academic career by learning computer “programming”.

In this regard, **Bluebell Research Initiatives Pvt. Ltd.** is offering “**Kid Programmers**” – a program that introduces kids to the concept of computer, mobile and robotics programming. “Computer Programming” is the future language of the world and it is imperative that the students learn this at a very early age.

Our innovative and effective offering would teach children Computer Programming and Robotics in a fun, creative and engaging way like never before. The children would learn how to solve mathematical puzzles, create computer games and make animation movies which would not only introduce them to a new paradigm but also improve upon their cognitive skills and analytical thinking. In this program we help kids to develop various technical skills of today and tomorrow with an emphasis on the fun and creative aspect of learning. **These skills would help them to excel significantly in their current and higher studies. Apart from that they can participate in various competitions which are recognized in the academia and industries.** We are conducting our courses in different reputed schools in Kolkata and Bengaluru and we wish to offer this course to your ward which will be beneficial for his/her future.

We would like to solicit your opinion for participation of your child in the program by filling and returning the section below. This would help us to plan the suitable courses and capacity planning for the program.

**Program Structure and Fees:** Rs. 800 per student/ month. There would be weekly two classes per week. There is no other expense from student side in terms of software or stationary.

Regards.

**Bluebell Research Initiatives Pvt. Ltd.**
